

The High Line Canal Must Be Given To Valley

Necessary To Complete the Original Elephant Butte Irrigation Project.

(Continued from page 1.)

Finally contemplated by the Elephant Butte project, but now above the level of the present canal system.

Would Reduce Dam's Cost.
By the construction of the high line canal and the reclamation of these lands, the cost per acre to the land owners for the Elephant Butte project would be reduced to about \$21 an acre as against the present cost of about \$71 an acre. (The original figure of the government on the subject placed the cost per acre at \$116.)

The construction of the high line canal would also make it possible to reclaim 5000 to 7000 acres out of 10,000 acres of land now in the river bottom, worth \$100 an acre.

There would be seepage water runoff at all times to keep the river channel open south of Mesilla Dam; above that point, to Las Animas dam, a distance of about 25 miles, plunging the river bed once a year, to keep down the weed and willow growth which cost only about \$1000 a year.

That the growth might stop up the river bed and cause serious damage in event of an overflow at the dam or heavy rain below, was advanced by engineers several years ago as the principal objection to the high line canal distribution. Mr. Richard Burges does not believe the river bed would ever grow up, where it is well defined, whether ploughed or not, and he says he is prepared to prove that beds abandoned by the Rio Grande as early as 1857 below El Paso are still without vegetation of any character.

The Power Generated.
The three power plants on the high line canal would generate 13,000 kilowatt-hours of electricity. El Paso could consume 4,000,000 of these. Harter, N. M., says of them and the rest could be sold in the valley. In fact, Mr. Burges figured that the valley and El Paso would soon consume all of the power and a contract with Harter should not be made for more than five years.

During the winter period of three months the amount of power generated would drop, but at that time arrangements could be made with the

company in El Paso during the power. It was stated to have orders ready to fire each day between 4 and 11 a. m. to augment the power from above during the period of the peak of the load. At all other times there would be power enough to generate all the electricity needed.

It is estimated that while the dam at Elephant Butte is no larger than necessary to supply the water needed for the land originally contemplated in the project (10,000 acres on the American side of the line), because of water stored land, inability to get the water on certain high lands, including that in the Pecos (Cortez) valley, etc., all the available water is not now used. The annual demand from the reservoir would be 10,000 acre feet a year if all lands originally contemplated for irrigation could be used, and this is about all it could supply.

To Reclaim Lower Valley.
With the one below El Paso of the waters now being drained out of the soil, and their use will be possible in a few years after the silts in a wash out of the soil, 40,000 additional acres can be reclaimed, restoring to the people of the Fort Hancock section their riparian rights temporarily denied them by reason of the international character of the Rio Grande.

and prior appropriations made in New Mexico and Mexico.

Pumps could be used, with cheap electricity, to irrigate 10,000 acres of land now idle in the Pecos valley and 8000 acres along the proposed high line canal.

The total value that would accrue to property in the valley as a result of the construction of the high line canal was figured by Mr. Brooks at \$2,500,000, while the government is asked only to loan \$2,100,000, against which the farmers will get \$4,000,000 and the city of El Paso \$1,000,000 in order that the farmers may carry out in a complete the full purpose of the originally contemplated Elephant Butte project, reduce their cost by bringing more acres into the project and insure a further reduction of cost for the future by the income from the power, and that the city may secure a cheap and permanent water supply for a million population.

DENIES THAT COSTA RICA WILL INVADE NICARAGUA

Washington, D. C., June 24.—Carlos Lara, representative here of president Pinco of Costa Rica, has made formal denial of any intention of Costa Rica to invade Nicaragua.

THREE KITS OF TWINS, 9 YEARS.

Shelbyville, Ind., June 19.—Three sets of twins in nine years is the record of Mr. and Mrs. Leo Huleman of this city. The latest twins, a boy and a girl, each weighed eight pounds at birth. Mrs. Huleman is 28 years old and her husband 43.

Camel Cigarettes

18 cents a package

Camels are sold everywhere in scientifically sealed packages of 20 cigarettes, or ten packages (200 cigarettes) in a glassine-paper-covered carton. We strongly recommend this carton for the home or office supply or when you travel.

They Win You On Quality!

Your enjoyment of Camels will be very great because their refreshing flavor and fragrance and mellowness is so enticingly different. You never tasted such a cigarette! Bite is eliminated and there is a cheerful absence of any unpleasant cigarette aftertaste or any unpleasant cigarette odor!

Camels are made of an expert blend of choice Turkish and choice Domestic tobaccos and are smooth and mild, but have that desirable full-body and certainly hand out satisfaction in generous measure. They are good all the way through and may be smoked liberally without tiring your taste. You will prefer this Camel blend to either kind of tobacco smoked straight!

Give Camels the stiffest tryout, then compare them with any cigarette in the world at any price for quality, flavor, satisfaction. No matter how liberally you smoke Camels they will not tire your taste!

A Wire From Mr. Moffett

In Mr. Moffett's absence, when I announced that we were out of SILVER CYCLE, I TOLD THE ABSOLUTE TRUTH.

This morning the following wire was received from Mr. Moffett:

"Wichita Falls, Texas, June 9—Mrs. J. R. Moffett: A little Silver Cycle stock is still available. Get behind it strong. Run ad Tuesday's TIMES and HERALD. (Signed) J. R. MOFFETT."

An hour later the following telegram was received, which was Mr. Moffett's statement on Silver Cycle:

"Wichita Falls, Texas, June 9—Mrs. J. R. Moffett: I have refrained up to this time from recommending the purchase of SILVER CYCLE—now that I have investigated on the ground, I say

BUY it. It has all the earmarks of a SURE SHOT. Smith says that he will have a well within the next 15 days. I never recommend unless I believe.—J. R. MOFFETT."

Mr. Moffett, being out of town, is not familiar with the exact situation here in El Paso on SILVER CYCLE. If he were here, our impression is that he would offer the stock at \$1.75 per share instead of \$1.50, the price we are offering it at in this announcement:

WE OFFER up to 4000 shares at \$1.50—with Mr. Moffett's statement back of every share sold.

WIRE ORDERS—following same by remittance.

IF YOU WILL GAMBLE ON A WILDCAT

WHY NOT A GOOD ONE AFTER SECURING THREE GEOLOGICAL REPORTS—ON—

140,000 ACRES

WE HAVE SELECTED 10,000 ACRES THE CREAM OF THE

JAMES RANCH

IN DALLAM COUNTY, TEXAS

and will drill a test well for Oil and Gas. We will start drilling with 10,000 acres and we propose to reach the bottom of the well with 640 acres—selling 9360 acres of our tract, the proceeds of which, the stockholders will own.

DO YOU KNOW THE VALUE OF ACREAGE ADJACENT TO A DRILLING WELL?

Then think what a wonderful gamble this is. Acreage enough to protect your investment and land enough left to make you wealthy if we bring a oil. Our company is organized by this business and professional men of Dalhart, Texas, who are betting their money there is Oil or Gas somewhere in the 140,000 acre ranch. This is surely an opportunity of a life time to get in on a project where the size of the acreage protects you and where the returns on finding Oil or Gas should be so enormous as to warrant a substantial purchase of an undivided interest with us in this big big lease.
